INTERNAL MEMO

FROM: CITIZEN SCIENCE DIVISION
TO: ALL STAFF

SUBJECT: LOOP16 EVALUATION

BODY //

It has come to our attention that aspects of the LOOP16 subroutine may have inconsistencies. Collectively, we have developed a test that should flush out flaws and help demonstrate the complexity of this iteration of the subroutine. We feel that improving Loop16 will bring to fruition our objective of advancing the roll out of update 1.3 of "a familiar universe." We would greatly appreciate your cooperation in administering this test of LOOP16 and we anticipate positive results.

Furthermore, we would like to extend our gratitude toward all involved with the creation and execution of LOOP16. This was truly a collaborative effort that will pioneer how simulations are designed and conducted. Not only has this experience been remarkably groundbreaking, but it has served as a testament to how well we can work together.

In closing, no matter what the results are, we should all be proud of what we have accomplished together. We have all learned a great deal of this experience and may that knowledge open new portals to good fortune and prosperity.

Regards,
Citizen Science Division
